

Table 6b: Non-Parametric Estimates of Income Ranks for Second Generation Immigrant Children by Parent Income, Country of Origin, and Gender

Description

This table reports predicted outcomes for second generation immigrant children by parent country of origin, income ventile (5 percentile point bin), and gender. The dataset is organized long on country of origin and parent ventile and wide on gender, and child income definition, so that there is one row per country of origin by parent ventile combination. The underlying sample used to construct these statistics consists of children born between 1978-1983. We obtain country of origin for the parents using the 2000 Census Long Form or the 2005-2015 ACS, prioritizing the country of origin of the father. We use the baseline definition of parent income, where parent household income is averaged from 1994-2000 and ranked within cohort among the set of parents with strictly positive average income.

The statistical summaries reported here have been cleared by the Census Bureau's Disclosure Review Board release authorization number CBDRB-FY18-195. We omit countries of origin with fewer than 500 children in each statistic we present. All estimates have been rounded to four significant digits and counts have been rounded following Census Bureau guidelines as part of the disclosure avoidance protocol.

Codebook

Variable Name	Description
par_ventile	Parent income ventile
country	Parents' country of origin (prioritizing father's country of origin)
n_[kidinc]_[gender]	<p>Number of second generation immigrant children from a given country of origin used to estimate income statistics for a given child income, parent income, gender combination.</p> <p>Where child income is either</p> <ul style="list-style-type: none"> • kfr = Child family (household) income rank • kir = Child individual income rank <p>And where gender is one of</p> <ul style="list-style-type: none"> • P = pooled male and female • F = female • M= male
[kidinc]_[gender]	Mean child income rank (individual or household) by gender for parents from a given country of origin in a given ventile of the parent income distribution.
